Techtextil 2024

The leading international trade fair for technical textiles and nonwovens

- **Exciting news: Techtextil will have more exhibitors than ever before!**
- **Very strong in the market and in high demand, Techtextil is always key for business**
- **High-class formats along the most current developments of the industries**

**20th
edition**

High-tech textile solutions for all applications

Textile-reinforced concrete

Complex landscape construction

Organ replacement

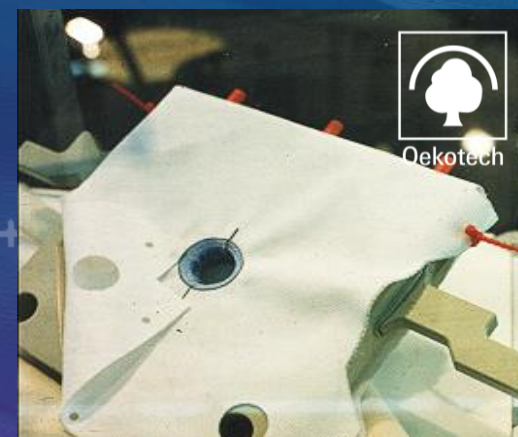

Airbags + interior cladding

Belts

Filter systems

GRASS YARNS & BACKING

A PLATFORM FOR UPCYCLING PLASTIC WASTE.

Perfect match: Econogy & Textile Recycling

- **NEW:** Juried presentations of
 - Recycable Fibres & Yarns, Hall 9.1
 - Recycable Materials, Hall 12.1
- Econogy Finder
- **NEW:** Econogy Tours
- **NEW:** Econogy Talks

Nature Performance

- **Natural and biobased fibres / materials**
- **Exhibitors will show the exciting performance of their products and innovations**
- **Future-proof functional properties for multiple use**
- **Special presentation: forward-looking Future material innovations and circular models**

Vérabuccia

Vérabuccia

The search for new vegetable „leathers“ crosses the lines of by-products of the food industry in a new experimental material. „Verabuccia“, derived from fruit waste, „Verabuccia“ was born in 2020 by the hand of Francesca Toni creator and Fabrizio Molteni and contains a new and innovative production process (patented), to convert a waste vegetable peel into a new material for the fashion and design sector. The first result is called Ananas and starts from the waste peel of the pineapple to obtain a material with a sticky surface, similar to that of a skin. Following the (patented) manufacturing process, the peel becomes a flexible, robust, stable over time and no peel sheet, which can be dyed, sewn, colored in various shades. On the contrary, activated by the presence of oxygen, a natural decomposition process will begin. The peculiarity of Ananas, however, is its aesthetic: over time it happens with other „vegetable leathers“ on the market, in which the manufacturing processes (shredding, kneading, extrusion, lamination, etc.) lead towards the imitation of real leather animal. Ananas keeps intact the initial visual appearance of a pineapple peel, enhancing the origin of the raw material and giving rise to particular and innovative decorative effects and textures.

Appreciation of the jury

Vérabuccia developed an innovative production process capable of generating a new material from fruit peels. It brings a whole class of new sustainable and circular materials to the fashion industry, with a new aesthetic look and tactile pleasure.

Decarded peels of fruit are recovered and using a new manufacturing process transformed in a flexible, robust, no-peel sheet. These peels are further joined with other peel sheets to become a single and uniform peel „leather“ like structure with the original appearance of the peel epidermis.

The jury appreciated the role of the two thinking of the developers. Their originality led to combining materials with diverse chromatic and textural effects, that can be transformed in innovative and appealing new fashion objects.

Techtextil Innovation Award

Outstanding innovations with maximum attention!

- Feel the brilliant character of the entire fair
- Award-winning products and researches
- Business relevant: Innovation Award attracts great attention and gives Go-to-market boost for winners

Beyond innovation! Techtextil Forum sets new standards

- Lectures curated by an international programme committee
- Decisive know-how from top market experts
- Outstanding panel discussions & industry impulses with international participants

techtextil

Start-up Stars

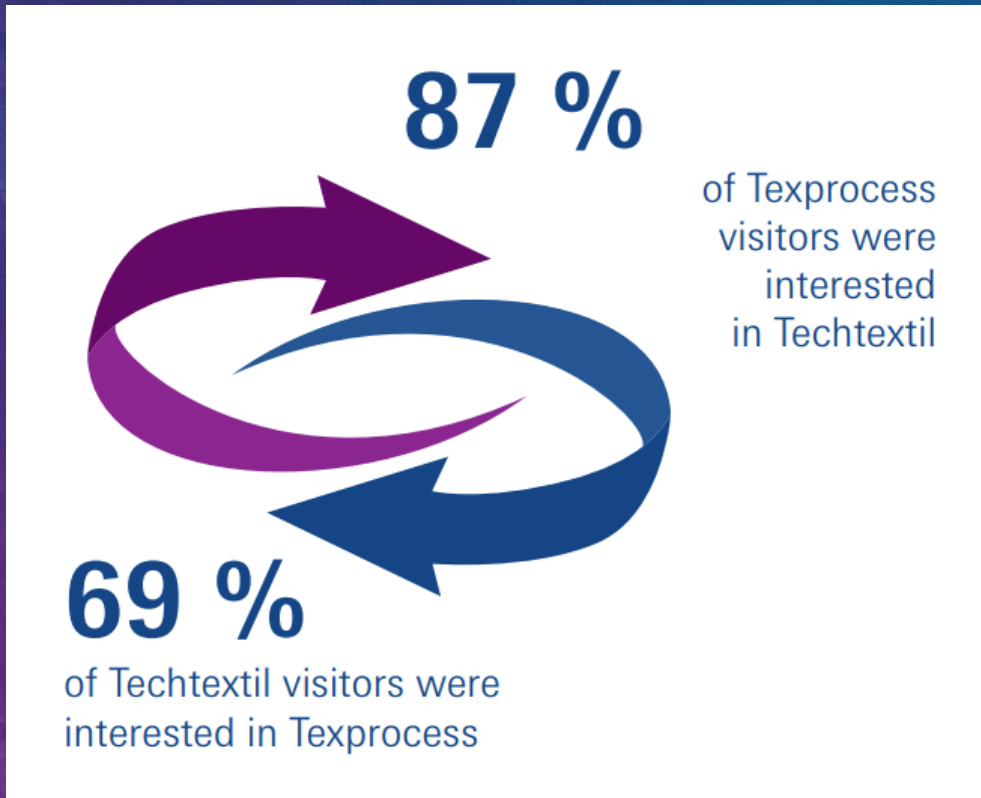

- We support the innovations of tomorrow!
- Up-and-coming & young companies present their unique ideas
- **NEW:** Functional Materials, Hall 9.1
- **NEW:** Textile Production Technologies, Hall 12.0

Campus & Research

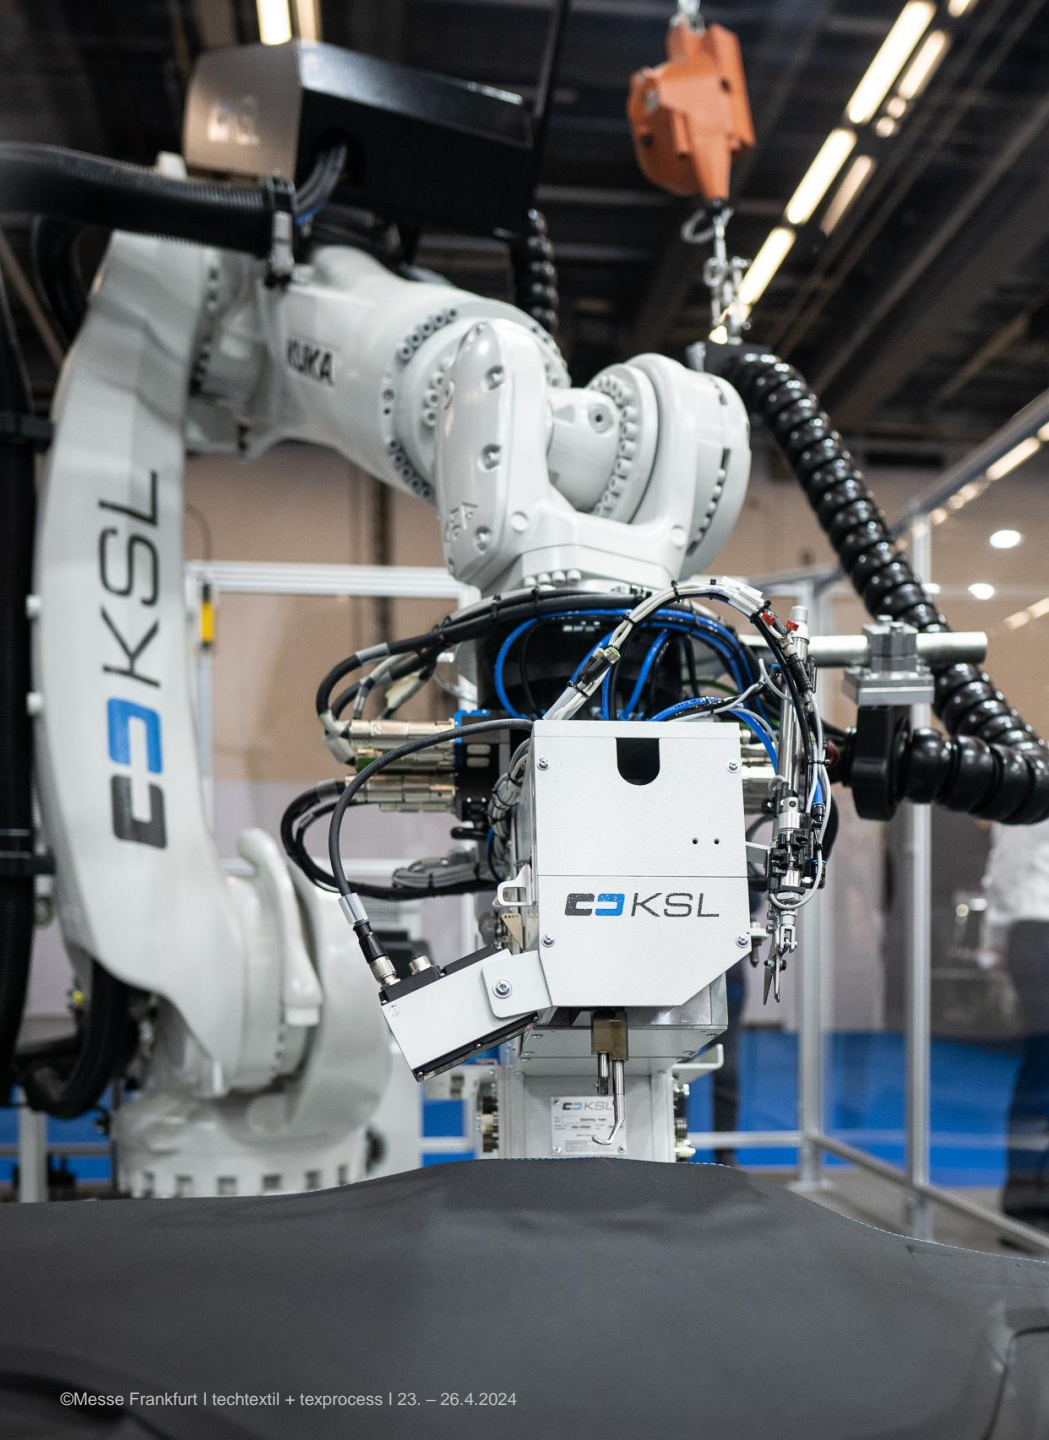

- Perfect exchange possibilities with international research institutes
- Providing visitors contact to qualified and motivated young researchers
- Meeting spot to find potential partners for upcoming research projects

The best in the textile world come together

- Buyers from **>86 countries**
- **>59%** top decision makers
- **71% international** exhibitors from **46 countries** at Techtextil

Texprocess 2024

The leading international trade fair for processing textile and flexible materials

- Exhibitors and industry players return with larger stand spaces
- Strong partnership with the VDMA
- Focus among others on Denim, Textil Recycling and Young Professionals

Denim Talks

- Experts and exhibitors share sustainable approaches about
 - washing
 - destroying
 - bleaching
 - lasering
 - dyeing
 - re- and upcycling
 - Customising
 - circular strategies

Texprocess Innovation Award

Texprocess Forum

Textile Recycling Technology

- New exhibitors area on mechanical recycling
- Sorting and recycling technologies
- Companies show their sustainable products and developments
- Programme for knowledge exchange
